<u>City of Broken Dreamers</u>
By PhillyGames
https://www.patreon.com/phillygames

This walkthrough intends to show all the paths through the game in an objective way. Colors and styles are only meant to highlights elements, not influence your decision. There isn't a right or wrong way through the game, only <u>you</u> should decide.

Only decisions that have an impact on the story or your character are shown. There are obviously many scenes that can play differently based on your choices, but "cosmetic" differences or small alterations in the dialogues are not part of this walkthrough.

The PDF is best viewed on a touch screen where it is easy to drag, zoom in and out with the fingers.

On a PC with Acrobat Reader, make sure to use the "hand" icon to easily drag with the mouse. Use Control + Mouse wheel to zoom in or out.

Legend

Character and game related attributes that can be increased/decreased (i.e.: a number value) will be represented with an icon followed by the character/description name: Bubu or Bubu

More complex values will be written as text instead:

girls kissed +20

Reference to these values will reuse the same icon or text:

Bubu is at least 5 girls kissed is at least 25

While the game is being developed, decisions that do not impact the story (yet) will be displayed like this:

Icons

: +1 Score point
: +1 Lust point
: +1 Depravity
: +1 Trust
: Battle mastery
: breaking a character
: -1 Score point
: -1 Lust point
: -1 Depravity
: -1 Trust
: Battle mistake

Note: There is a new variable tracking something (how she is coping with the past maybe?) between Sonja and you in chapter 8 and 9. It isn't clear yet if it will have any impact in the future. I currently marked it with the (positive impact) and (negative impact) symbols.

Flow Symbols

Skip until the next section

Decision labels

When something you do can have an impact later on in the game, a label will be visible where it happens like this decide something $^{#123}$

In some rare cases decisions can be reversed, to distinguish it more easily the label will look like this did not decide something $^{\#123}$

References to this label will also include the same number so it is easy to track it down to where it happened (could be multiple places). decided something $^{\#123}$

While the game is being developed, decisions that do not impact the story (yet) will be displayed like this:

¿agree ; #55

Reversed decisions that do not impact the story (yet) will be displayed like this:

¿did not agree; #55

Check the last page of the walkthrough to learn how you can use the developer console to cheat alter their value for your benefit: Cheat without a MOD (<u>link</u>).

Enjoy the game!

"chlfutapartial" in extraevents

"chlfutafull" in extraevents

"chlellen" in extraevents

So you want to try out a new branch but do not feel like completely starting over a new game? Don't worry, with the developer console you can easily modify in-game variables. You only need some basic understanding of scripting, no MOD required.

type Shift+O in the game (Hold the SHIFT key and type the letter O). If not, close the game, go to the game directory and either create a file named options.rpy or edit with a simple text editor (e.g.: Notepad) if it already exists. Write the following lines at the end: init python:

First of all, you need to enable the developer console, if you are lucky it is already enabled,

config.developer = True **Note:** There are 4 spaces before 'config.developer = True'

In many cases the game might start correctly once but crash after that.

If that happens delete the file options.rpyc that gets created automatically after starting the game with the file options.rpy present

This can be automated on windows with the following script: BrokenDreamers.cmd with the following content: del game\options.rpyc

start "" "BrokenDreamers.exe" Start the game and load a savegame, type SHIFT+O to open the console and use the ESC key to exit **Character variables**

set variable / new value: what to type in the developer console to turn the variable on or set a new value unset variable: what to type in the developer console to turn the variable off **check current value**: what to type in the developer console to check the current value

set variable / new value unset variable
